Hopworks

Starbucks  
Catholic Charities development  
Jolene's First Cousin  
Unicorn Bake Shop

C-Bar  
Community Music Center  
Gladstone St. Pizza

\* What's a Walkabout: an informal stroll among a group of neighbors and friends

If you celebrate the Holiday Season with a natural Christmas Tree, here is information about the **Norway Spruce** Tree to share with your family and friends:

The Norway Spruce was so revered by early pioneers that the trees were often brought from Europe and planted on new homesteads. Sometimes called “mother and father trees,” a pair might still mark the spot where a farmhouse once stood.

The wood has value for lumber, pulpwood, and other commercial uses, and its shape, color, and density make it a favorite choice for Christmas Tree trimming. The Norway Spruce is tolerant of drought and various soil textures and its dense branching pattern also makes it an excellent windbreak and border in home landscaping.

#### Characteristics:

- **Needles** are arranged on all sides of the twig, about .5” to 1” long and the needles feel square when rolled between the fingers
- **Cones** are erect on the branch until fertilized, then they gradually turn downward and are 4” to 6” long and narrow with stiff, light brown scales when mature (these cones are the longest of any spruce)
- **Bark** is reddish-brown and thin on young trees, becoming thick and grayish with surface scales that flake off as the tree ages
- **Form**, on young trees, the branches reach upward and as the tree matures, the lower branches droop but with the ends sweeping upward like a ski jump and Mature height is about 60’ with a 25’ to 30’ crown spread
- **Planting** preference is full or partial sun and these trees will grow in loam, sand, or clay soil that is moist and well drained and are suitable for growing zones 3-7

*Happy Holidays and Best Wishes for a Wonderful 2020  
from your Neighborhood Association*
